ΔΩΔΕΚΑΤΤΑ ΔΟΓΜΑΤΑ.

OR AN

ALMANACK

for the Year of our

LORD GOD

1692:

Being the Biſſextile or Leap-year, and of the Worlds Creation, 5641.

Wherein is contained the Lunations, Conjunctions and Aſpects of the Planets, the inequality of the decreaſe and length of the day and night, with the riſing, ſouthing and ſetting of the Planets, Fixed and Fixed Stars throughout the Year, whereby may be known the exact hour of the night at all times, when either the Moon or Stars are ſeen.

Calculated according to Art and referred to the Horizon of the ancient and renowned Corporation Town of *Stamford*, whoſe Longitude is 0 deg. 50 minutes, Latitude 52 deg. 41 min. ſerving all the middle Counties of ENGLAND without ſenſible errour the whole Kingdom.

By *JOHN WING* Mathemat.

CAMBRIDGE,
Printed by *John Hayes* Printer to the Univerſity, 1692.

Common Notes for this present Year,

according to the

Julian, English or old account.		Gregorian or new account.

Here Gods Vicegerents do in order stand
And how successively each Rul'd the Land,
May we not want a Monarch great indeed
Wise, good and gratious, mercifull in need:
For such a one may all good Christians stand
Both now and always for to Rule this Land.

Day 10 hours and an half long.
Venus sets 40 min. past 7 at night.
Great Dog south 40 min. past 7 at night, and sets 13 min. after midnight.

Day 11 hours long.

What is't to me if Forraign Nations groan
Since Englands *Monarch standeth firmly* [illegible]
Who doth maintain all our just Laws and Rights
'gainst all opposers and fond hypocrites
Long may his fame thus triumph in his sphere
Untill his enemies be subdu'd for fear.

WING.

WING

A PROGNOSTICATION

for the Year of our

LORD GOD

1692.

Being the Bissextile or Leap-year.

Wherein is contained the exact time of the Sun's Ingress into Aries, from New and accurate Tables not yet extant, with a Figure shewing the position of the Heavens at that time, from whence the state of the Year is predicted, with the Ingress of the Sun into the three other Cardinal Points, deduced from the same Tables. In this part also is a Table shewing the hour of the day by a plain Rod or walking-staff; as also a pleasant Chronology of memorable things since the Creation of the World: The Eclipses, with the Calculation of two that will be seen in our Hemisphere, if Clouds do not interpose.

Cœli enarrant gloriam Dei fortis, & opus manuum ejus indicat expansum eorum. Psal. 19. 1.

CAMBRIDGE,

Printed by *John Hayes*, Printer to the University, 1692.

Tabula serviens ad inveniendum horam diei per umbram baculi in plano positi divisam in 12 partes æquales.

| Hor. afternoon / Ho. forenoon | D | I | A | L | | |

To find the true Hour of the Day by the former Table.

TAke a Staff of what length you please, and with a pair of Compasses divide it into ten equal parts marking them upon the Staff; then in some level place where the Sun doth shine, set it upright, and mark where the end of the shadow falls; which done, measure with your Staff the length of the shadow, and note the parts it contains, which find out in this Table right against the day of the month, and over head you will find the true hour of the day; as will appear more clearly by example.

Suppose the 9 of *April* or 13 of *August* I should find the shadow of the Staff to be 36 parts and a quarter of a part more, that is, three Staffs length, and a quarter of a part, therefore seeking in the Table, against the said days, I find 30 ¼ which is 36 parts and a quarter, and I see over head, that it is then either 7 a clock in the morning, or 5 in the afternoon; so that if your observation was in the morning, it was 7; but if in the afternoon, 5 a clock.

Thus the 13 of *February*, or 8 of *October*, if the shadow of the Staff be just 19 parts, it is 12 a clock, if 20 it is one a clock, if 24 two a clock, if the observation be made in the afternoon.

Thus you see the Hour of the Day is exactly and speedily found by a Rod or Staff and the help of this Table; so likewise by the Kallender part may the hour of the Night be known either by the Moon, Planets, or Fixed Stars, being of excellent use to all sorts of Men.

A Compendious Chronology of Memorable things since the Creation to this Year 1692.

Welcome good Reader to another Year
Where better times then formerly appear
And confirmation I have here in hand
By Guido, Haly, Ptolomy's command.
These and such Worthies have confirm'd to me
Things are foreknown by pure Astrology.
Tho some deny the Stars have Influence
Others affirm, their powers they dispense.
But be this as it will I am content
To serve Urania whilst I am in Print.

Of the Spring Quarter.

WE have in this Revolutional Figure following 3 degrees 46′ of ♈ Ascending, being the beginning of the Spring quarter, and the Sun's touching the first scruple of the Equinoctial Sign ♈, which according to the foregoing Calculation happens on *March* the 9 day at 3 hours 32′ 32″ P. M. at which time the heavens are disposed as the Figure directs, and as to what may be gathered by the Rules of Art and Law of Nature from this Year Revolution, I shall here set down with as much brevity as conveniently I can, and give you the sence and opinion of Authors thereupon, including also what the Position

of the heavens Astrologically declare from the New Moon preventional, and Full Moon postventional; the former happening the 7 day of *March* next 11 at night, in which ♏ Ascends, and ♒ Culminates: in the latter which happens the 22 day of *March* at 8 A. M. the last degree of ♓ Ascends, and 24 of ♎ Culminates, these considerations being had, the next inquiry is, what Planet is Lord of the year, of which there is no small difference amongst Authors in the Election thereof, as *Ptolomie*, *Haly* and others affirm, and who so pleaseth to consult *Bonatus*, shall find, that he hath proposed no less then 54 several Rules or Considerations for the finding out this matter, *Albumasar*, and

Hermes, saith that the Planet at the time of the Revolution that shall happen to be Angular in the Horoscope, M. C. seventh or fourth houses, shall be Lord of the Year, but I shall follow *Ptolomy* as formerly, and accordingly find ♃ Lord of the Year, tho more particularly of the Spring quarter, who is posited in the ☽ house, the Angle of Religion, which seems to Compose those differences that has so long been raised and continued about it, and as making men (contrary to the Rules of Christianity) envy, revile, and abominate one another; but since it thus happens that ♃ is not only Lord of the Year and in the ☽ house, but is also ✶ of ♂ Lord of the Ascendant and △ to ☉ in the Ascendant, which Coroborates the former Argument, and that the Common people shall be more unanimous, and have a good opinion of their Governors, and bid high for the perfecting the bond of amity betwixt King and People, but ♄ is mounted unto the M. C. and ☐ to ☉ from the 8 house, which threatens Death to great and eminent persons in the world, and particularly in *London*, and the parts adjacent, for ♊ where ♄ is posited is by Astrologers term'd *London's* Ascendant, ♄ Angular in ♑ in the 4th and nearly ♂ to ☿ in ♊ in the M. C. should seem to poyson the minds and happiness of the Nobility of the Nation, but his being Stationarie to Retrogradation, looks as tho he turn'd Tail and repented the matter, as one ashumed of what he was going readily to promote, and if we duly consider the position of the Moon which is △ to ♄, ✶ of ☿ and ♂ with the Sun and ♀, we have no great reason to distrust the publique peace, tho we may expect about *July* to hear of the ill contrivance and plotting of ill affected persons, which happily may be prevented, and themselves meet with a reward answerable to their deserts. But to return again to our former Figure, it is the opinion of Authors that if ♃ be Lord of the Year (as here) and in no Aspect or Configuration of the Sun or other Planets, he produces a temperate Air, fruitfull season and plenty of the fruits of the Earth, as also moderate wholsome and Salubrious Northern winds, where-

by

by all living Creatures and seeds are comforted, to which purpose *Haly* saith *Lib. 8. Cap. 4. Quod Ventis temperatis aëris calor, & frigus hyemis temperantur, & quod minuantur Epidemiæ infirmitates ac pestis.* The reason is the air is more sound and healthfull by the breathing of the North winds which it causeth, which is the more to be confided in by reason he is so well aspected as before, which also causeth men of Religious orders to be had in good esteem, and that they agree well with one another, and had in Reverend esteem by their Superiours as well as Inferiours, receiving much good and content from both, *Si fuerit ♃ infortunatus significat malos status Nobilium hominum, Regum Alcaydorum & Judicum*, as *Haly* saith. *Saturn* strong in the 4th revives the hearts of the poor Farmers, which has been so near the point of ruin these several Years, tho their industry has been greater then ever, yet such has been the fate of most of them to be reduced, extream low in estate, by reason all sorts of Grain and Stock has been at so low an ebb for near this last 7 Years, and Landlords so hard hearted not to consider it, for several of them rather then they will proportion their Rents according to the times, will suffer the utter ruin of their poor Laborious, Carefull, and Industrious Tenants, tho it be to their own prejudice and loss also, neither dare these poor men scarcely allow them necessaries in Meat, Drink and Apparel, or perhaps date to sleep quietly in their Beds, for fear of their Landlords seizing what they have, and tho some Landlords are so cruelly unkind and unchatable, yet others do really commisserate, and consider their poor Tenants, and make Considerable abatements, which undoubtedly will one day turn to as good account, for good and charitable works cannot go unrewarded. But to reiterate our former matter ♂ in the 10th house in ♊ to ☉, ☾ as before intimated) according to some Authors, is the unhappy Author of sedition, privy Conspiracy, and Rebellion, and that no good conclusion can be expected from such a position, however let time unvail her mystery, for it will do that which is not prudence for me to mention, however in a short time

I morally hope better times will appear, both to *England*, *Ireland*, and *Scotland*, which have been all ſufferers of late, if we obſerve to follow the counſel of the Holy Prophet *Ezek.* C. 18. *V.* 27. to do that which is lawfull and right, and alſo break off our ſins by ſpeedy repentance, and to continue not only a good opinion, but pay a ready and chearfull obedience to our Lawfull Governours, and to be at peace and amity one with another, laying aſide all Rankor, Malice, Pride, Swearing, Whoreing, Lying and Drunkenneſs, which the Nation ſo exceedingly abounds with, then might we expect better times, and a laſting peace amongſt us, all which God of his infinite mercy grant for *Jeſus Chriſt's* ſake. Amen.

In the Spring quarter are theſe Remarkable Configurations following.

Die 13 *Martii* ☐ ♄ ☿. 16 ✶ ♐ ☿. 20 △ ♄ ☉. 24 ☌ ♐ ♀ 29 ☐ ♂ ☿. 30 ☍ △ ♄ ☿. *Die* 9 *Aprilis* ☌ ☉ ☿. 12 ☌ ♄ ♀. 18 ✶ ♂ ☿. 20 ☌ ♐ ☿. 29 ☌ ♄ ☿. 30 ✶ ♐ ♂. *Die Majus* 1 ✶ ♐ ♂. 7 ☌ ♐ ☉. 12 ✶ ♂ ☉. 17 ☌ ♄ ☉. 21 △ ♄ ♂. 29 ✶ ♑ ♀. 31 ☌ ☿. *Junius Die* 2 △ ♄ ♀. 7 ✶ ♂ ♀.

This Quarter begins with a temperate and good Air with moderate ſhowers, producing a forward Spring, the middle not much unlike the beginning, the end to heat and drought.

Of the Summer Quarter.

THE Summer Quarter doth always commence when our Earthly Star enters into the firſt point of ♈ (the place of the Sun from the Earth being then juſt entering ♋) making our longeſt day and ſhorteſt night, which cometh to paſs this Year on Friday the 10 day of *June* at 4 ho. 5′ after noon, which is found by the following Calculation.

	h.	d.	′	″
Anno 1692		19	19	54

June the 10 Day	M.	75'	9	40 39
At 4 hours and 5' P. M.			10	3
Hence the middle motion of the Sun is		2	29	44 55
The Anomaly of the Sun at that time is		11	22	27 32
Prosthaphæriſes add to the mean motion			11	5
The Suns true Place is found		☌	00	00 00

In this Summer Quarter happens these ſeveral Configurations following.

Die Junii 11 ☌☿☽. 12 ☌♄♃. 23 ☍☌♀. ☽ *Die* 2 *Julii* □♄♀. 4 ☌☌☽. 5 ◪♄☿. 6 ☌♀☽. 13 ◪☿♀. 16 △♄☉. 19 △♄☽. 20 □♃☌. 22 ☍☽♀. 24 ☌♃☿. 27 ☌♃☉. 28 ☍☍♀. *Die* 4 *Auguſti* ◪♄☽. 10 ◪♃♀. 11 ☍☿☽. 12 ◪♃♀. 16 □♄☉. 20 ☌♄☿. 23 ☍☿♀. 24 ☌♄☿. ☌☍☌☽. 31 ◪♃☉. *Die* 3 *September* ◪♄☿. 5 △♃☽.

The beginning of this Quarter is hot and dry, the middle ſhowers with Thunder, and ſometimes gentle winds, But the end temperate and ſeaſonable.

Of the Autumn Quarter.

THE Autumn Quarter beginneth at ſuch time as the Sun toucheth the firſt point of the Equinoctial ſign ♎, or more really when the Earth enters the firſt ſcrupule of ♈, and hath volved her ſelf at right Angles with the Sun, and receiveth a like portion of light and darkneſs, which either way taken, falleth out this Year upon Monday the 12 day of *September* at 3' paſt 5 in the morning, as the following Calculation directs.

Anno 1692			9	49 54 33
September the 11 day			8	11 20 24

At 17 hours 3' P. M. ☽ 01 42 00

The Suns mean motion	6	1	56 47
The Suns Anomaly	2	24	39 11
Proſthaphæriſes Subſtract		1	56 47
The Suns true place	♎	00	00 00

This part of the Years Revolution produceth theſe following Configurations.

Die 14 *September* ☌♎☿. 18 ☍♄☉. 21 ☌☌☿. 27 ☌♎☿. 29 ☌☉☿. 30 □♄☾. *Die* 2 *October* ☌♎☉. 19 □♎☾. 19 ☌♎☿. *Die* 9 *November* ☍♄☾. 11 ☌☌☉. 14 ☌♎☾. 17 ☌☌☿. 20 ☌☉☿. 22 ☌♄☿. 23 ☌♄☉. 24 □♎☿. 26 ☍♎☉. 29 ☌♄☾. 30 ☌♎☾. *Die December* 3 ☌♄♎.

We have a great Congreſs of the Planets in *November*, and of a Pernicious Natuer alſo, and I fear too nearly concerns our Metropolitan *London*, for the Maleſects are conjoyned in the Celeſtial Archer, in ☾ to *Londons* Aſcendant, and ♃ oppoſes ♄, ☉ and ☌ from ♐ *Londons* Aſcendant. God preſerve that famous City and all that reſide in it (and the Nation alſo) from the ill contrivance of all diſaffected perſons, and from all ſudden ſurprizes, and from every thing that's hurtfull.

This Quarter begins with weather fit for the harveſt, the middle with rain and winds, the latter end produces clouds with cold rain or ſnow, and wintely weather.

Of the Winter Quarter.

THE Winter Quarter beginneth at ſuch time as our Earthly Globe hath volved it ſelf to the greateſt Northern inclination, whereby we her Northern Inhabitants, being furtheſt deflected from the Suns Raies, receive leaſt portion of light, cauſing our ſhorteſt day and longeſt night or (according to common opinion) when the Sun enters

the first minute of ♈, which either way taken, happeneth this year upon Saturday the 10 day of *December* at 7 ho. 5′ P. M.

	☉	☽		
Anno 1692	9	19	54	23
December the 10 day	11	10	2	43
At 7 hours 5′ P. M.			17	20
Hence the Suns mean motion	9	0	14	42
The Suns Anomaly		22	56	45
Prost haphæriſes Subſtract			14	42
The Suns true place	♈	00	00	00

In this latter part of the Year will appear to be theſe following Aſpects and Meetings.

Die 31 *December* ☌♃☿. *Die January* 6 ☌♄☉ 13 ☌☉☿. 19 △♃☉. 23 ☌☌☿ 25 ✶♄☉. *Die* 13 *February* △♃☽. 14 △♃☿. 16 ☌☌☿. 18 ☍♃. 19 △♃☿. 21 ✶♄☿. 26 ✶♄☌. 27 ✶♄☽. *Die* 1 *Martii* □♄. ☌☌☿. 7 □♃☿.

This Quarter begins with cold Raw and moiſt weather, the middle ſomewhat Frotty, but moſtly variable, the latter end fitting the ſeaſon.

Of the Eclipſes this Year 1692.

THere is Five Eclipſes which will happen to the Inhabitants of the Earth this preſent Year viz. three of the greater Luminary the Sun, and two of the Moon, which happen as followeth.

The Firſt is a defect of the Moon upon the 23 day of *January* near 2 of the Clock in the afternoon, therefore not to be ſeen of us, but will be ſeen of thoſe that inhabit *Nova Guine*, *Inſulis Salmonis*, *de la Agnada*, *de los Tubarones*, *los mongos*, the Maſter Kingdoms and parts adjacent.

The Second will be a ſmall Eclipſe of the Sun on the 7 day of *February* near 5 in the morning and invisible to us alſo, but only

may be seen to them who inhabit the *Lucach*, *Beach* the Islands *des Romeros*, and the Provinces of *India &c.*

The third is an Eclipse of the Moon upon the 18 day of *July* in the morning, and to be seen here in *England*, if Clouds hinder not, as the following Calculation directs.

The Calculation.

	S.	D.		
	D.	R.		
Middle time of the true ☌ is *July*	17	15	20	46
